

Figure S1

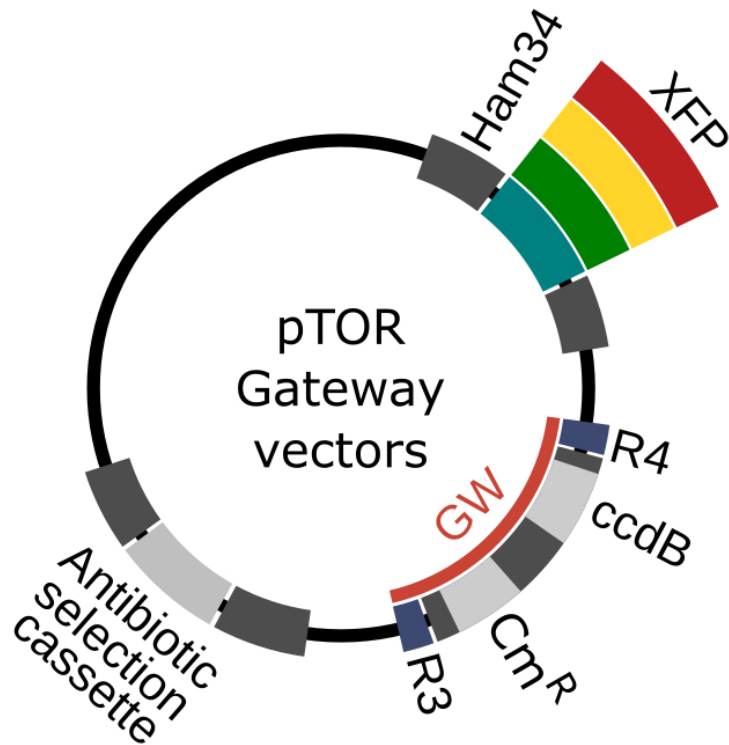

Figure S1. Schematic representation of the pTOR-Gateway vector series. A multisite attR4/attR3 Gateway insertion cassette allows for rapid testing of multiple promoter-reporter constructs. Adjacent is a cassette for constitutive expression of a cytoplasmic fluorescent reporter (either mTFP1, mWasabi, mCitrine or tdTomato) under the control of *Bremia lactucae* promoter Ham34. Vectors carry neomycin phosphotransferase (*nptII*) selectable marker.
